

## Java

```
class Solution {  
    public long[] unmarkedSumArray(int[] nums, int[][] queries) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {number[]} nums  
 * @param {number[][]} queries  
 * @return {number[]}  
 */  
var unmarkedSumArray = function(nums, queries) {  
  
};
```

---

## TypeScript

```
function unmarkedSumArray(nums: number[], queries: number[][]): number[] {  
  
};
```

---

## C++

```
class Solution {
```

```
public:
    vector<long long> unmarkedSumArray(vector<int>& nums, vector<vector<int>>& queries) {

    }
};
```

---

**C#**

```
public class Solution {
    public long[] UnmarkedSumArray(int[] nums, int[][] queries) {

    }
}
```

---
